Dubai Accord Institutional Implementation Roadmap

A staged pathway for implementing the Accord over the first 12 months and ongoing review

Use this roadmap to translate the Dubai Accord into visible, documented and participatory action. The four stages organise institutional focus, illustrative actions and evidence of progress from mobilisation through ongoing review.

	TIMEFRAME	Institutional focus	Illustrative actions	Evidence of progress
1	0-3 months	**Mobilise and map**	Nominate a responsible group or change management champion; map current policies and technologies; identify high-risk gaps; begin consultation.	Governance owner; policy map; technology inventory; consultation plan.
2	4-6 months	**Clarify and build capability**	Publish interim guidance where needed; strengthen AI literacy; review assessment instructions; establish evidentiary and human-review expectations.	Updated guidance; training; sample assessment statements; case-handling protocol.
3	7-12 months	**Reform and embed**	Complete the Accord self-review; revise priority policies; address access gaps; review surveillance/detection tools; strengthen procurement and quality assurance.	Completed self-review; action plan; revised policies; documented technology reviews.
4	Ongoing	**Evaluate and improve**	Collect feedback; monitor educational impact and unintended harms; review annually or when major technological change warrants earlier action.	Annual review summary; feedback; evidence of changes; updated risk register.

How to use this artefact

1. Locate the timeframe that best matches your current stage of implementation.
2. Use the institutional focus and illustrative actions to agree immediate priorities.
3. Track progress using the listed evidence rather than creating unnecessary documentation.
4. Review annually or when major technological change warrants earlier action.

Implementation should be proportionate, visible, documented and participatory.

This roadmap supports implementation planning; it does not certify compliance.
